

## Install Software via the FileWave Kiosk

The Tech Support department has created an easy way for you to install software on district computers. A red flame icon is now available in your menu bar (If not, contact the helpdesk). Here are examples for Windows and Mac:

To install **district** software, click the flame icon. A menu will appear, then click "Install Software...". This will show you a list of available software. Click the "Install" button next to the software to start the installation.

This list of software is updated regularly. If you have a request for software you want installed that you feel will be beneficial for any student or employee machine, please send any request using a help desk work order; link found at [tech.provo.edu](http://tech.provo.edu).

This works with almost any software or files and works on any computer in the district; Mac or PC, employee or student, so please be specific in your requests. Example: Updates to testing software.

**Note for Mac users:** The district can now install Mac App Store apps to teacher computers without the need to use your personal AppleID. If it's a free app just request it in a work order. If it's a paid app then approval will first go through your principal or supervisor.

Please contact the help desk if you have any questions.
